Tensors Explained Intuitively: Covariant, Contravariant, Rank - Tensors Explained Intuitively: Covariant, Contravariant, Rank by Physics Videos by Eugene Khutoryansky 1,136,130 views 6 years ago 11 minutes, 44 seconds - Tensors of rank 1, 2, and 3 visualized with covariant and contravariant components. My Patreon page is at ...

Describing a vector in terms of the contra-variant components is the way we usually describe a vector.

Because both quantities vary in the same way, we refer to this by saying that these are the "co-variant" components for describing the vector.

We can distinguish the variables for the co-variant" components from variables for the "contra-variant components by using subscripts instead of super-scripts for the index values.

What makes a tensor a tensor is that when the basis vectors change, the components of the tensor would change in the same manner as they would in one of these objects.

is a vector.

instead of associating a number with each basis vector, we associate a number with every possible combination of two basis vectors.

we associate a number with every possible combination of three basis vectors.
